

Though on paper the Nord lead has a fairly simple layout, the inclusion of digital waveforms and new filters has given the range a new lease of life and an expanded palette.

With Pure I wanted to provide a lush and full sound all the way through, the bank contains huge pads, silky strings, brooding atmospheres, deep basses and rich plucks and leads.

My enthusiasm for all things dance music permeates this volume, but it doesn't dominate it. As such my hope is this bank will suit a wide variety of genres and production styles.

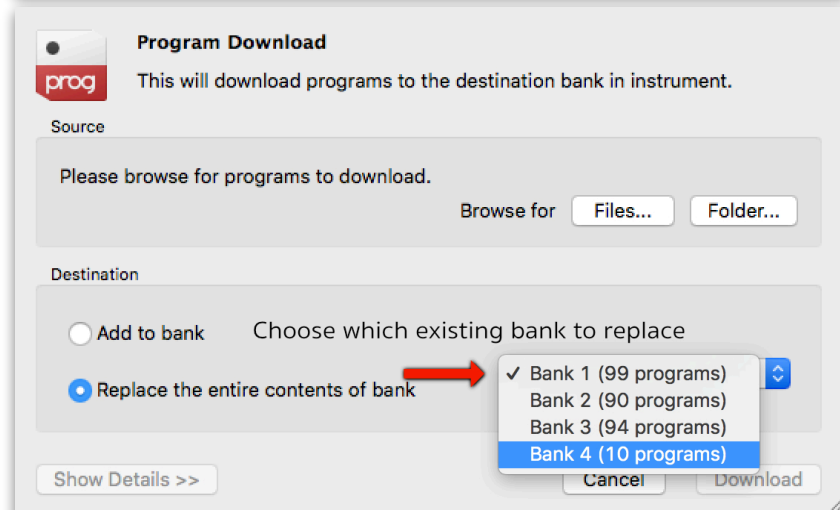

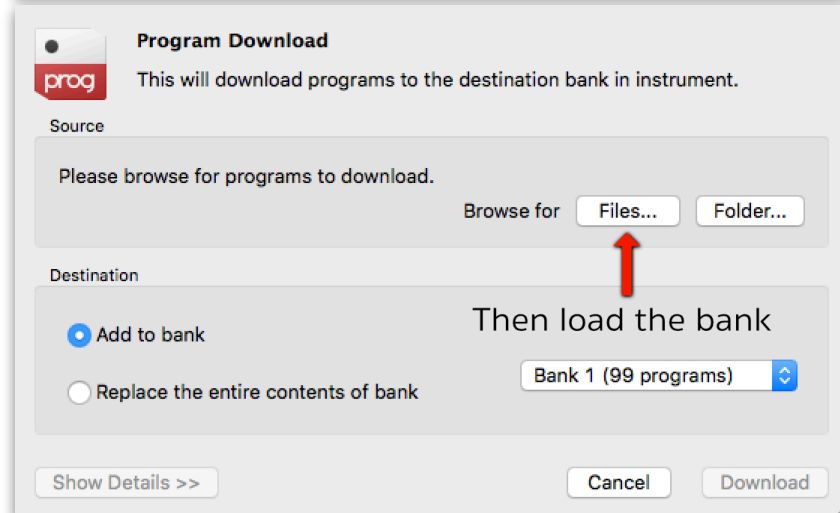

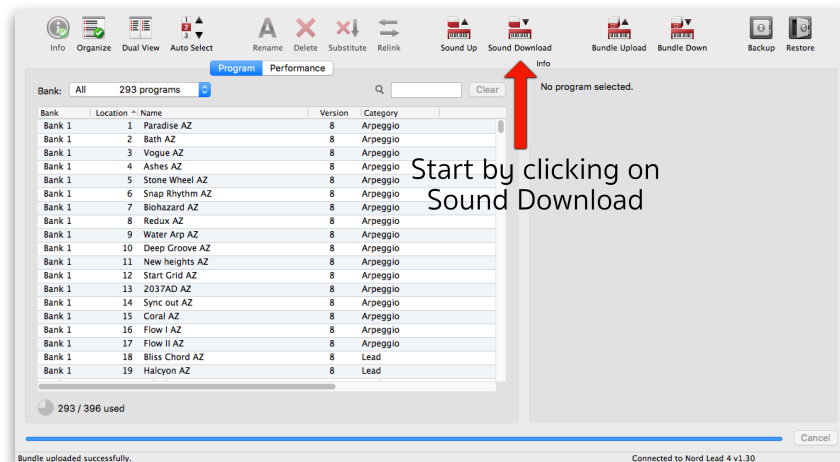

The Nord can only display the patch numbers, but if you download Clavia's "Nord sound manager" you'll see the names and categories of each patch. This is also an easy way to download the bank onto your Nord in a bank slot of your choosing. Be careful not to overwrite your own presets! You can easily back up your own banks with the software just to be safe.

This pack contains 99 individual sounds, filling an entire bank, plus a bank of performance patches. Some of the performance patches are just combinations of the individual sounds, unchanged, but most have been tweaked in some way or are entirely new. Besides this some of the performance patches are programmed to behave just like individual sounds, but benefit from access to more oscillators resulting in a richer tone than could be achieved with individual sound slots.

Finally, the categories are merely guides. A pluck can sometimes make for a great bass sound, a bass sound for a lead and so on. I hope you find this bank an inspiring addition to your production toolset.
