

Though on paper the Nord lead 4 has a fairly simple layout, the inclusion of digital waveforms and new filters has given the Nord engine a new lease of life and an expanded palette.

"Pure" provides a lush and full sound all the way through, the bank contains huge pads, silky strings, brooding atmospheres, deep basses and rich plucks and leads.

The influence of electronic dance music runs through the bank, but does not dominate it. As such my hope is this bank will suit a wide variety of genres and production styles. Patches are designed to inspire and feature mod wheel assignments.

This pack contains 99 individual sounds, filling an entire bank, plus a bank of performance patches. Some of the performance patches are combinations of the individual sounds, unchanged, but many have been tweaked in some way or are entirely new.

Some of the performance patches are programmed to behave just like individual sounds, but benefit from access to more oscillators resulting in a richer tone than could be achieved with individual sound slots.

Finally, 35 MIDI files, as heard in the demo, provide musical inspiration and examples of context.

99 Individual patches  
25 Performance patches  
35 MIDI files  
Modwheel assignments
